Features

Regulated Converter

- 160W baseplate-cooled, fan-less operation
- 230W peak power or forced air rating
- Universal AC input range (80~264VAC)
- Standby power consumption <0.5W
- Wide operating temperature range (-40°C to +80°C)
- Household, ITE and medically 2MOPP certified
- Operating altitude up to 5000m

RACM230-G

230 Watt 4" x 2" Open Frame or Enclosed Single Output

3 YEAR warranty

Description

The RACM230-G Series is designed to support up to 160 watts continuous output power without fan cooling. The compact 4"x2" baseplate design enables direct heat dissipation through metal housings in the application. Up to 230 watts are available to drive dynamic loads for several seconds of peak power or with forced air for even longer time frames. A smart fan output is on board as standard. A wide input range of 80 to 264VAC, up to 5000m operating altitude, 4kVAC isolation and international safety agency certifications make the series worldwide compliant for medical 2 MOPP, household and industrial ITE applications.

Notes:

Note5: The products were submitted for safety files at AC-input operation. For DC-input make sure that sufficient fuses are used

Note6: By trimming up, decrease output current to avoid exceeding rated output power. By trimming down, do not exceed maximum continuous output current. If enclosed version is used, please remove cover, to use trim function.

Note7: Measurements are made with a 12“ twisted pair-wire terminated with a 0.1µF and 10µF parallel capacitor

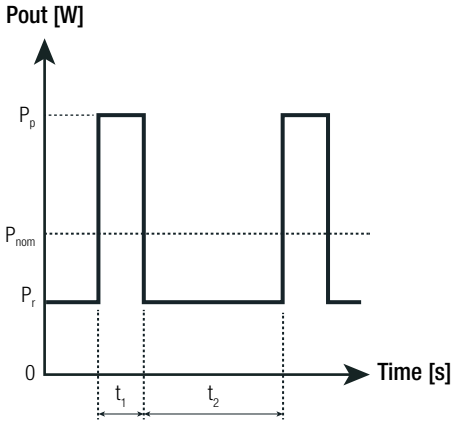
Peak Load Capability

Calculation

P_{nom}	= nom. output power	[W]
P_P	= peak output power (≤230W)	[W]
P_r	= recovery output power	[W]
t_1	= peak time set (10s max.)	[s]
t_2	= recovery time (min. 4 x t_1)	[s]
k	= safety factor 1.7	[ ]

$$P_r = \frac{P_{nom} \times (t_1 + t_2) - (P_P \times t_1)}{t_2 \times k}$$



Practical Example (RACM230-12SG):

Take the RACM230-12SG at 230VAC input Voltage and full load at T_{AMB}= 25°C (160W) with conduction cooling.

$P_{nom.}$ = refer to derating graphs (160W)
P_P = 230W
t_1 = 1s
t_2 = 40s
k = 1.7

$$P_r = \frac{160 \times (1 + 40) - (230 \times 1)}{40 \times 1.7} = \underline{\mathbf{93W}}$$

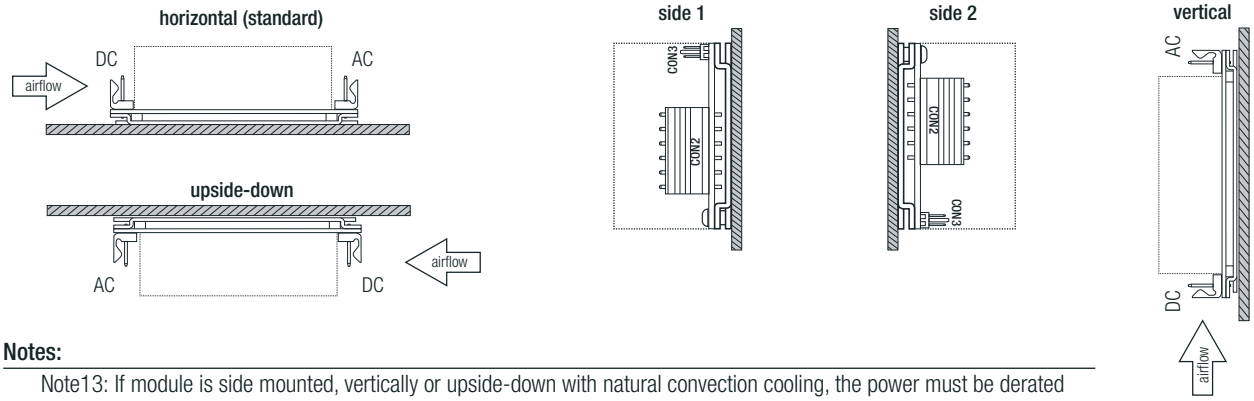
INSTALLATION AND APPLICATION

Mounting



Notes:

Note13: If module is side mounted, vertically or upside-down with natural convection cooling, the power must be derated down to 85% for the RACM230-12SG, for the other models 90%.
For convection cooling, ensure sufficient distance to adjacent components!
Device should be fan cooled from DC side.
